

Why ARHIA v11.4

TR-2026-034

The vendor-neutral governance runtime that operationalizes ARISE, NIST, CSA ATF, OWASP Agentic Top 10, and Singapore MGF into executable policy-as-code for regulated agentic AI deployments.

THE PROBLEM

Enterprises face a **three-layer vacuum** in agentic AI governance:

Layer 1 — Standards (ARISE, NIST, CSA ATF, MGF) tell you *what* to govern.

Layer 3 — Vendor toolkits (NVIDIA, AWS, Azure) tell you *how* to build — but are vendor-locked.

Layer 2 — The Executable Runtime — is vacant.

No vendor-neutral framework converts governance standards into enforceable, auditable policy-as-code at runtime. Compliance stays on paper. Incidents happen between audits.

ARHIA v11.4 FILLS THE GAP

ARHIA is the **only framework** that:

- Converts 5 governance standards into **2,279 lines of OPA/Rego**
- Enforces **36 auditable controls** at runtime — not on paper
- Provides **zero-trust agent identity** (NHI 4-layer chain)
- Detects cross-domain anomalies via **4-layer CLAS engine**
- Auto-dispatches **10 OWASP ASI incident playbooks** in real-time
- Deploys inside client VPC — **Zero Data Exposure**

v11.3 → v11.4 EVOLUTION

| Metric                   | v11.3        | v11.4             | Delta     |
|--------------------------|--------------|-------------------|-----------|
| Auditable Controls       | ~21 informal | 36 formal         | +71%      |
| OPA/Rego Lines           | ~1,277       | 2,279             | +78%      |
| Framework Crosswalks     | 4 partial    | 5 full + CSF 2.0  | 100% cov. |
| OWASP Playbooks          | 0            | 10                | NEW       |
| Maturity Models          | 1 partial    | 6 full            | 6×        |
| Correlation Rules (CLAS) | 0            | 10                | NEW       |
| Evidence Types           | 0            | 5 (JSON-LD)       | NEW       |
| Agent Identity           | ATK-only     | NHI 4-layer chain | NEW       |

FRAMEWORK COVERAGE

THREE-PLANE ARCHITECTURE

WHO IT'S FOR

- CISOs & CRAIOs needing auditable agentic AI governance
- Regulated enterprises (banking, insurance, healthcare)
- Compliance teams mapping standards to runtime controls
- Engineering leads building secure multi-agent systems
